Red Medica

Convergence
SERVICES

Development proposal to our client to bring technology to a non-conventional sector.

01

Developments

Red Medica

Red Medica is a web platform which is logged in with a username and password depending on the profile of each user, it has service profiles such as: health centers, private doctors, mobile telemedicine tents, laboratories, pharmacies, etc.

It also has a user/patient profile which is enrolled organically from a chat with AI that redirects to the service. Within the profiles there is a system of points and loyalty for health servers and donations from citizens. This platform is generated for users at a national level and is designed to be scalable.

Smart Card

Convergence
SERVICES

We developed the platform and technology for our client SmartCard allowing them to offer their customers smart cards that reflect their style, brand or company with unique designs, affordable prices and high quality.

02

Developments

Smart Card

We developed an intuitive and secure platform to configure their smart card profiles. This platform allows you to customize your smart card with the information they want to share, such as their name, phone number, email address, RRSS, etc.

The cards allow networking links to be established with anyone without the need to download any application. This feature allows users to freely share their information so that the other person can instantly view their contact information and store it.

RS Arkmy

Convergence
SERVICES

Web development of a social network for gamers in search of rewards that encourages them to execute calls to actions.

03

Developments

RS Arkmy

The development operates thanks to sponsorships that seek exposure of their brands and support from the army in other channels such as RRSS, increasing loyalty and creating a better image.

Players enroll and this allows them to obtain benefits such as: gift certificates, movie tickets, redeemable cards for mobility app and other digital ones such as power-ups to improve the games available and that will give them access to greater rank rewards. There are also several daily and weekly missions, which when completed will place them in a weekly ranking to obtain redeemable rewards. Like any social network, it allows you to send invitations to your friends to join the Arkmy community and play online.

Payment system and turnstiles

Convergence
SERVICES

We developed a strong, secure and intelligent system for the access control to the train passengers for the management and automatization of the payment at software and hardware level.

04

Developments

Collection system and turnstiles

We include services such as:

- Hardware
- Software insite
- Monitoring
- Testing
- Updates
- User App
- Maintenance
- Maintenance platform
- 24/7 help desk support
- 800 number to attend cases based on the SLA

The vending machines with the Windows 10 Professional operating system allowed the equipment to be connected to local networks (LAN), the Internet or a specific intranet, either through a cable or wireless WiFi connection. The vending machine has an electronic wallet and receives various forms of payment (cash, TDC, TDD, Carnet, NFC, rechargeable card and app).

Document/ template creator

Convergence
SERVICES

Efficient and secure generation of communication templates for multiple channels

05

Developments

Document/ template creator

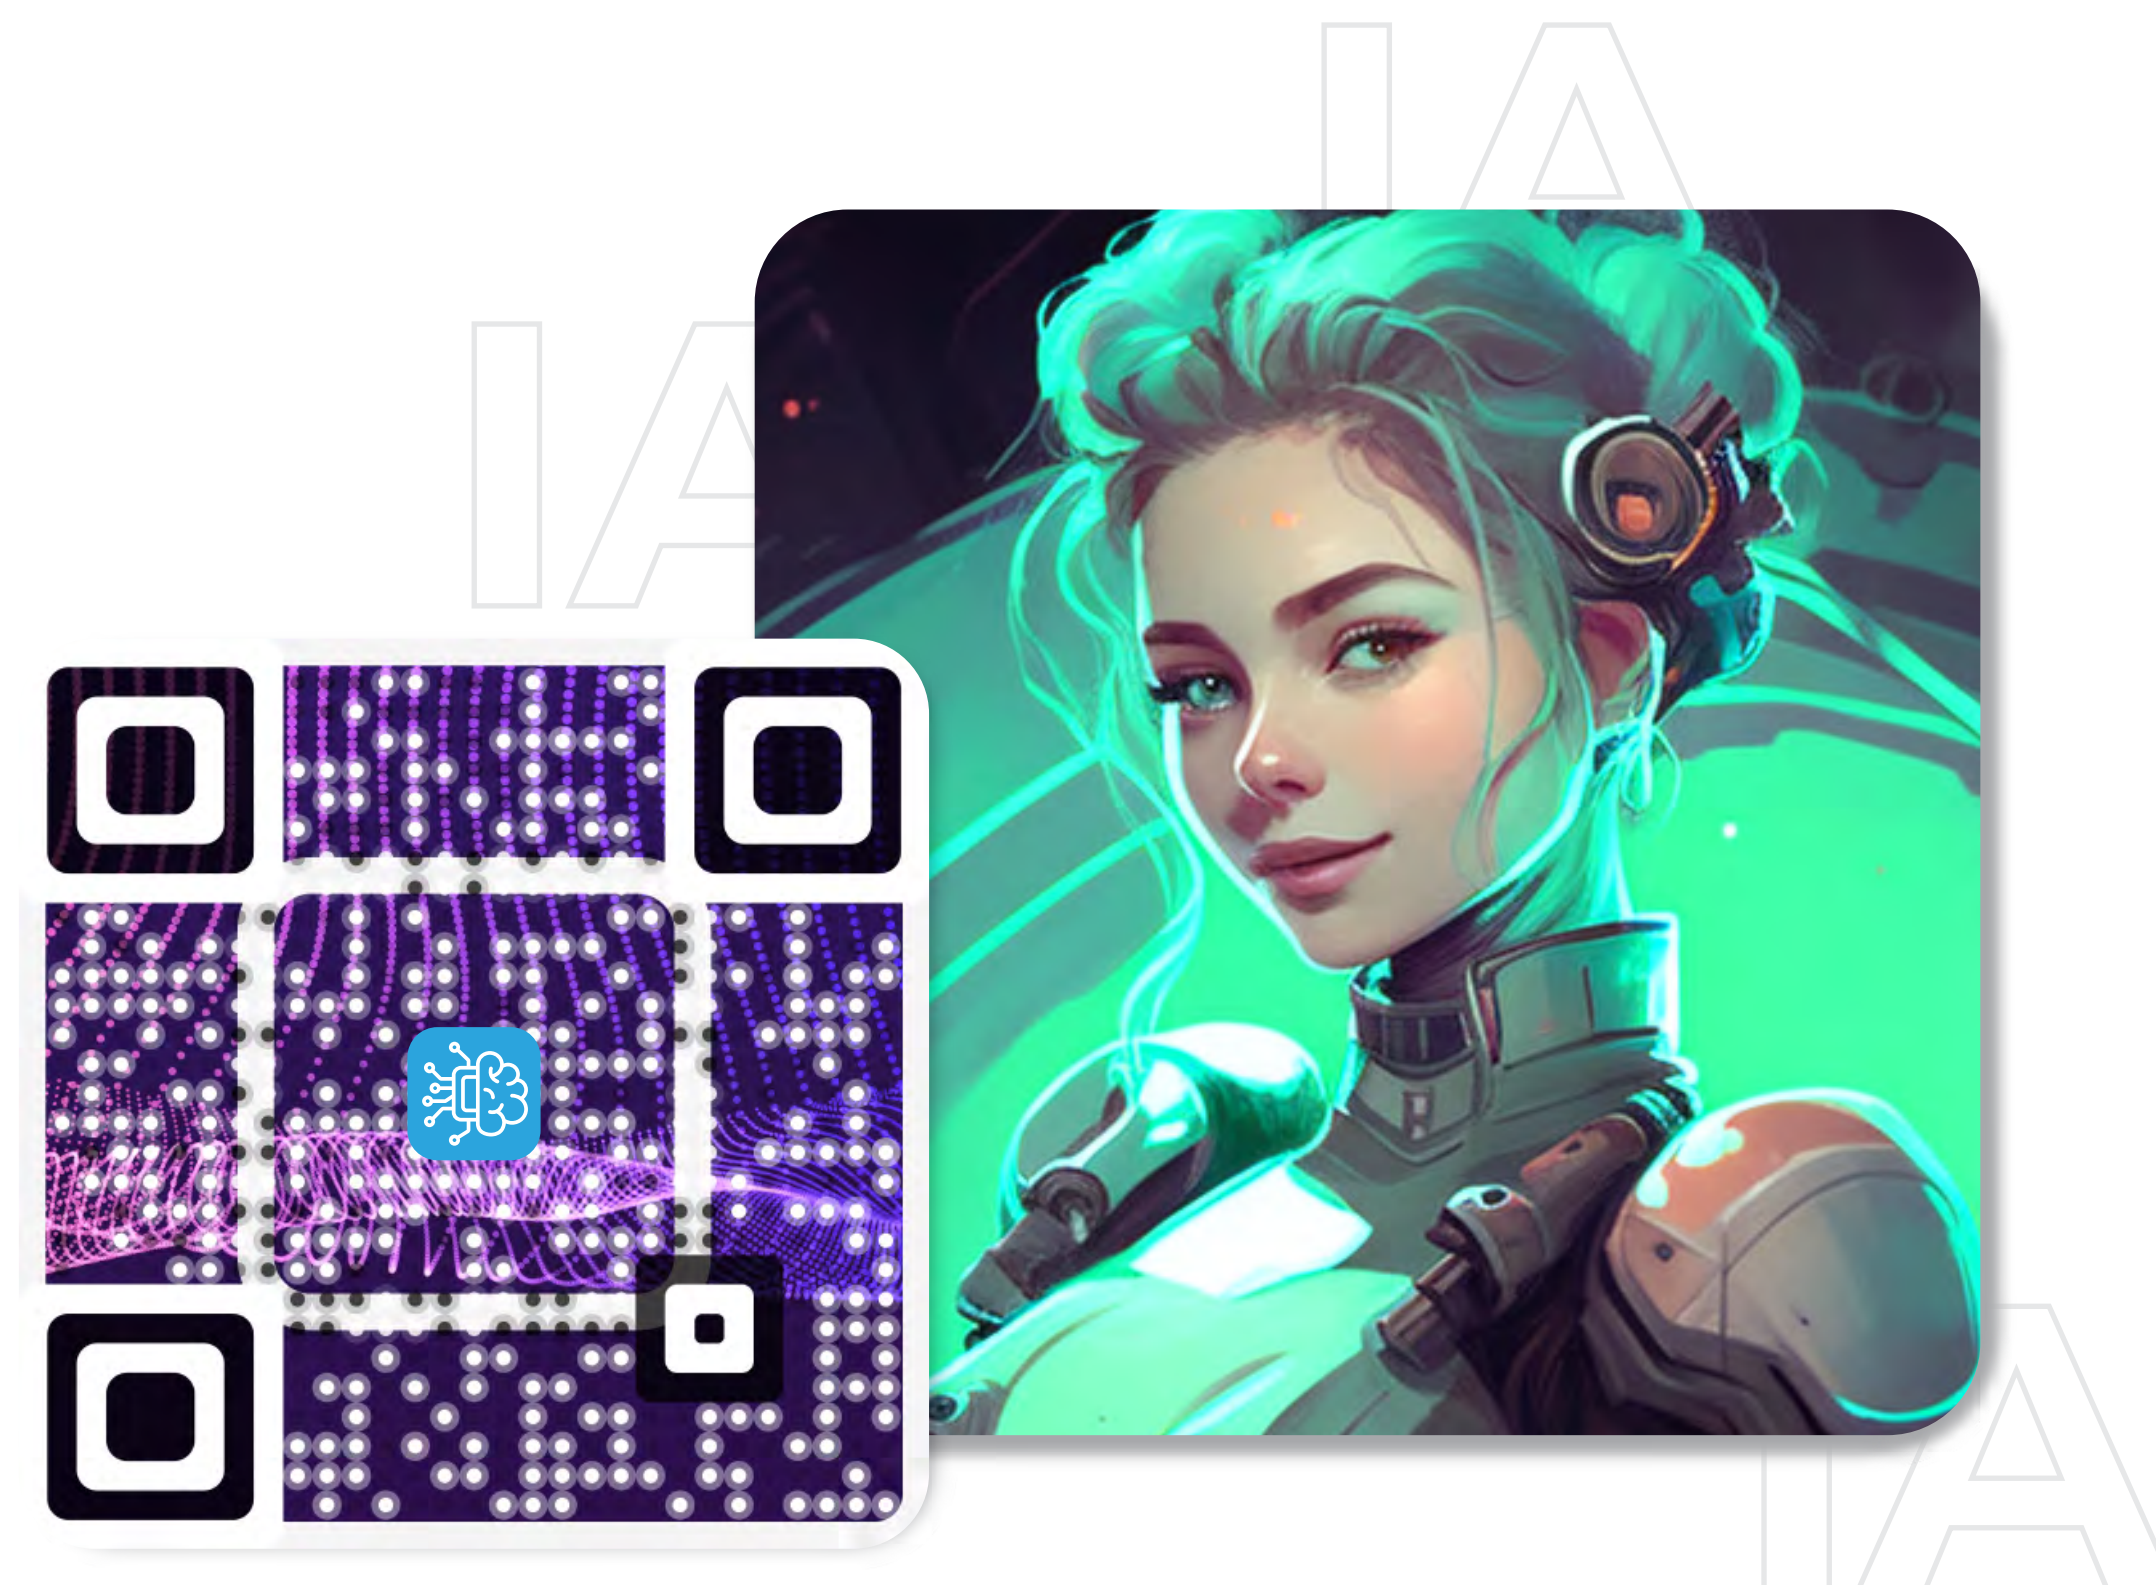

Creator of digital and physical templates such as brochures, pamphlets, emails, among others. This comes from an user-friendly interface, with drag and drop design, using different inputs, either graphics (images) or text (CSV, xlsx, etc.), performing mathematical operations and cross-referencing to extract, transform and load the values from different sources (either fixed or dynamic) into a final design.

**Artificial
intelligence**

Convergence
SERVICES

We bring to our customers AI technology that improves business performance and productivity by automating processes or tasks that previously required human effort. This capability can generate significant business benefits

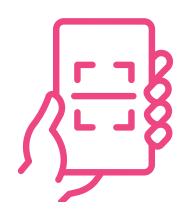

06

Developments

Artificial Intelligence

We integrate AI into the operation flows in different areas, as well as make our AI available to you in a more practical channel so that you can become familiar with it, learn how to train it and get the most out of it as a tool.
